## Bilston Church of England Primary School

We will aspire through our Christian beliefs and attitudes for all children in our care to flourish both academically and personally; develop respect for others and to reach out to their local and global communities, so, 'hand in hand together with faith we will strive to achieve all things...

## 'I am able to do all things through him (Jesus) who strengthens me.'

## Calculation policy, KSI

The following pages show the Power Maths progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across Power Maths helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

Adopted by Governors- Summer 2022
Curriculum Leader-M Johnson

## KEY STAGE I

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10 s and Is to develop their calculation strategies, especially in addition and subtraction.

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10 s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations.
A key idea is that children will select methods and approaches based on their number sense. For example, in Year I, when faced with $15-3$ and $15-13$, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods. In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.

Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with $2 \mathrm{~s}, 5 \mathrm{~s}$ and 10 s . In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division.
They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation.
In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.
Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2,5 and 10 times-tables and how they are related to counting.

Fractions: In Year I, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole
In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.

Year I

Understanding teen numbers as a complete 10 and some
more
Complete a group of 10 objects and count more.
Adding by counting on
Children use knowledge of counting to 20 to find $a$ total
by counting on using people or objects.
I 10

|  |  | 7 on | $7+5=$ |
| :---: | :---: | :---: | :---: |
|  | Adding the is <br> Children use bead strings to recognise how to add the Is to find the total efficiently. $\begin{aligned} & 2+3=5 \\ & 12+3=15 \end{aligned}$ | Adding the is <br> Children represent calculations using ten frames to add $a$ teen and Is. $\begin{aligned} & 2+3=5 \\ & 12+3=15 \end{aligned}$ | Adding the Is <br> Children recognise that a teen is made from a 10 and some Is and use their knowledge of addition within 10 to work efficiently. $3+5=8$ <br> So, $13+5=18$ |
|  | Bridging the 10 using number bonds Children use a bead string to complete a 10 and understand how this relates to the addition. <br> 7 add 3 makes 10 . <br> So, 7 add 5 is 10 and 2 more. | Bridging the 10 using number bonds Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to IO . | Bridging the 10 using number bonds <br> Use a part-whole model and a number line to support the calculation. $9+4=13$ |
| Year 1 <br> Subtraction | Counting back and taking away <br> Children arrange objects and remove to find how many are left. | Counting back and taking away <br> Children draw and cross out or use counters to represent objects from a problem. | Counting back and taking away Children count back to take away and use a number line or number track to support the method. |
